A MESSAGE FROM THE PRESIDENT & CEO

Healthcare is expensive in Connecticut.

The reasons are plentiful, but a more informed and better coordinated utilization of our current system can help lower healthcare costs and improve outcomes, making our healthcare system more effective and more affordable for everyone.

Connecticut is home to industry-leading healthcare resources, services and expertise, but the costs of using our world-class healthcare ecosystem are unsustainable under the current model.

We can do better.

Our search for a better approach started a couple of years ago when the leadership of Saint Francis Healthcare Partners and ConnectiCare began taking a close look at the payor-provider relationship. We quickly identified some significant (and frustrating) challenges for consumers. The industry as a whole was mainly operating in a fee-for-service environment: patient visits provider; health plan pays provider. All too often, the consumer/patient was treated as a transaction, lacking the type of relationship with his/her provider that is really needed to achieve the highest possible healthcare value.

We saw a window of opportunity to test a better approach to the way payors work with providers; one that is collaborative, reduces inefficiencies and duplication of activities, shifts the focus to

the value of care and centers on the consumer by removing or reducing barriers to improve their access to care and enhance their experience.

Along with ConnectiCare, Saint Francis Healthcare Partners and other industry participants, the Connecticut Health Council

recently formed the **Value-Based Relationships work group**. The group consists of health plan representatives and provider systems, doctors, pharmaceutical companies, consumer advocates, insurance brokers, various social-services providers and others all working collaboratively to change healthcare in Connecticut and to ensure that the consumers who trust us with their health receive world-class care and attention.

This year's 2018 Annual Report is focused on value — value to our shareholders, value to our payor partners and value to the consumer.

We can do better and it starts with us!

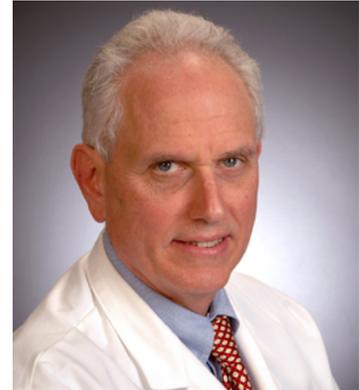

As I end my career at Saint Francis Healthcare Partners and transition to the next chapter of my life, I wish you all good health, prosperity and peace.

Jess Kupec
President and CEO
Saint Francis Healthcare Partners

A MESSAGE FROM THE BOARD CHAIR

This year's annual report is appropriately focused on “value” — value to our patients, shareholders and payors. The most frequent question I get asked is “When are we going to move to value?” The answer is — “we already have.”

As Chair of SFHCP Board of Directors and a private practicing physician, I have witnessed first-hand the transition from a pure fee-for-service (FFS) model to one focused on quality metrics, payment for achieving those quality metrics and for managing total cost of care or total medical expense.

This transition has not replaced FFS. However, while we will continue to be paid for what we do, increasingly we will be financially rewarded for how well and where we provide care and at what total cost for a defined population. The value model is here and it is not going away.

For the past seven years, Saint Francis Healthcare Partners has been leading us on this journey to value. It's now up to all of us to embrace it, enhance it and make it work for our patients and for those of us providing care in a value-based model.

Throughout the years at SFHCP, our shareholders, physicians and hospital alike, have always responded favorably to the challenges brought on by change. Let us not forget clinical integration in 2003, Allscripts Electronic Medical Record (EMR) in 2004, Epic, ongoing shared savings, the Annual Participation Fee (APF) and more.

I am proud to represent SFHCP as its Board Chair, but even more importantly all of the outstanding physicians, mid-level providers, practice managers and SFHCP staff that collectively have improved healthcare for our patients.

Please continue to do what you do best — provide outstanding care to those who seek our services!

Respectfully,

Ellison Berns, MD
Board Chair
Saint Francis Healthcare Partners

In 2018, Saint Francis Healthcare Partners was named a Top Workplace!

The Hartford Courant recognized SFHCP as a Top Workplace in 2018. As one of sixty companies to share the honor, SFHCP excelled in a diverse set of categories including: employees working together toward a common cause, company values, encouragement of new ideas, and fostering of employee growth and education, as well as pay, benefits, and training.

Eight hundred employers participated in the anonymous employee survey administered by the research firm Energage. Participants included private companies, public agencies, non-profits and other organizations with at least 50 employees located in Hartford, Middlesex, New London, Tolland and Windham counties.

“Companies with high levels of employee engagement are typically the ones that are recognized by the survey. This is the culmination of 25 years of work by the entire organization,” said retiring president and CEO, Jess Kupec. “Receiving this award is a testament to a culture created by our employees. It reinforces the importance of hiring the right people and then giving them the resources they need to be successful. It is the reason that I love coming to work everyday.”

We thank our employees for making Saint Francis Healthcare Partners a great place to work.

Creating Value for Health Plans and Consumers

When SFHCP formed 25 years ago, no one could have foreseen the changes that have shaped the current healthcare landscape in Connecticut and across the country. Health plans have come, gone, and merged. Non-traditional healthcare entities like CVS have entered the payer market. Hospitals and providers have joined together to create regional health systems. A majority of employers have moved from fully insured to self-insured benefit plans, and technology has created greater efficiencies and better informed consumers.

Over the past 6 years, SFHCP members have invested in a value-based model of care designed to drive higher quality, lower costs and better patient experiences.

What has not changed is the fact that healthcare is too expensive and quality is too inconsistent considering the financial, technological, and human capital invested in its delivery.

In today's market, an employer with under 500 employees (most employers in Connecticut) can expect

the cost of an insurance renewal to be in the range of \$1,100–\$1,300 per employee per month. That equates to up to \$8M per year. In return, most of those employers and their employees will receive healthcare in hospitals that rank well below a top quality rank of “A”

“As a long-time leader in providing healthcare benefits to the residents of Connecticut, Anthem understands the need for innovation and change in order to continue meeting the needs of its customers. We are proud to work with industry leaders like SFHCP to leverage our collective expertise and establish new models of care and health insurance products that shift the focus to the value of care. The quality and value that SFHCP providers deliver every day is a primary reason why we designated SFHCP as a preferred provider organization in Anthem’s HealthSync value based products.”

Jill Hummel, President & General Manager
Anthem Blue Cross & Blue Shield, Connecticut

“Our goal is to provide consistent, reliable and transformational healthcare where members are offered tailored programs to help them prevent or manage chronic illness, build a trusting relationship with a primary care provider and actively manage their health,” says **Mark Santos, President of the New England Market at Aetna**. “As part of our network of high value providers across Connecticut, we recognize and value the work of Saint Francis Healthcare Partners to help us achieve that goal.”

or “4-Stars” according to industry recognized organizations. Many will also visit doctors and other providers who work independently and not in integrated provider systems that focus on coordinating care and eliminating expensive, unnecessary, and duplicative services. As Jess Kupec states in his introductory letter, “we can do better”.

In fact, SFHCP has done better. Over the past 6 years, SFHCP shareholders have invested in a value-based model of care designed to drive higher quality, lower costs and better patient experiences. That investment, coupled with the work of Connecticut’s major health plans, is making a difference.

Changing how employers purchase and consumers utilize healthcare is not easy. Consumers are used to, and prefer, access to a broad network of providers. They value choice... but it comes with a higher cost that has become more difficult to afford. To address this growing problem, some health plans and providers have teamed up to develop tiered networks that will deliver lower costs and higher quality to those consumers who elect to use providers in the highest value tier.

In 2018, SFHCP was one of a limited number of provider organizations invited to participate in important new tiered network initiatives (based on their value proposition). The first initiative was Aetna Whole Health, an ACO product that offers

“SFHCP’s commitment to improving quality, engaging members and driving value in the CT healthcare system genuinely helps people live healthier lives,” says **Abe Berman, Regional President, Network Management at UnitedHealthcare**. “Their collaborative approach to population health management has made a positive difference for many UnitedHealthcare members.”

“SFHCP, by virtue of its experience and commitment to value-based care, is a great example of the type of organization we encourage our members to use,” says **Mark Santos of Aetna**. “We believe that when our members connect with SFHCP providers, it will enhance communication and the continuity of care – and ultimately engages them with a healthcare team who will help them navigate their health needs and improve their overall experience, while driving efficiency and controlling costs.”

a value-based health care option to employers that uses financial incentives to encourage people to take a more active role in managing their health and seek care from high-value providers like those in SFHCP.

Another tiered network initiative is UnitedHealthcare’s Nexus ACO product, which offers employees of national companies access to highly accomplished care providers with proven results for delivering high quality and efficient care, resulting in better health outcomes and lower costs.

Tiered network products will save money for consumers and their employers, while at the same time increase revenue for SFHCP providers due to a shift of services from lower tiered providers to SFHCP. Health plans know that tiered networks would not be successful if high value providers like SFHCP did not exist and offer a meaningful cost and quality alternative for their clients.

Last year SFHCP took a fresh look at how we utilize the Joint Operating Committees (JOCs) we maintain with each of the health plans. The primary purpose of these JOCs is to have clinical, operational and contracting experts from each

organization meet monthly and review how our value-based ACO contracts are performing and to identify opportunities for improvement. Typically, SFHCP JOC members review a package of charts, graphs, ratios and statistics prepared by the health plans to help inform our clinical activities. We felt something was missing and realized that buried in all this information were the patients we manage day in and day out. Therefore, SFHCP decided that every JOC meeting would begin with a patient success story to remind our health plan colleagues and ourselves why we do what we do.

“

*“Anthem has a long history of mutually successful contract negotiations with SFHCP,” says **Lou Fiorillo, Regional Vice President, Network Management, Anthem Blue Cross & Blue Shield, Connecticut.** “We respect SFHCP’s desire to negotiate fair terms on behalf of their providers, and appreciate their acknowledging the challenges facing consumers in the current healthcare environment.”*

”

While we continue to invest and focus on our ACO contracts and value-based care, we recognize that Connecticut is still very much a fee-for-service market. The majority of SFHCP providers’ revenues rely on the organization negotiating fair payment rates for the services they provide. These negotiations have become more difficult as health plans are being challenged by their clients to help them manage the cost of care. The relationships that SFHCP has developed and maintains with health plan leaders and contracting executives serves as a solid foundation for these difficult and complex

negotiations as we continue the important transition from fee-for-service to value.

Much important work has been done, and much more work lies ahead if we are to create meaningful and long-lasting change to healthcare in Connecticut. SFHCP has long demonstrated its commitment to driving change and will continue to be the choice of, and work with, health plans and other key stakeholders to develop a model of healthcare that is affordable and delivers a level of quality that Connecticut deserves.

“

*We share a commitment with Saint Francis Healthcare Partners to improve quality, cost, and patient satisfaction,” said **Robert Kosior, Senior Vice President, Chief Operating Officer at ConnectiCare.** “Our partnership in the areas of case management, clinical coordination, and data sharing, all center around providing the best care for our members. SFHCP has demonstrated the ability to work with us to improve health outcomes for more than a decade. We appreciate and share their vision for a future environment that is built on a value-based model of healthcare delivery and funding. Working together with SFHCP and its providers we believe we can make a difference in Connecticut healthcare.*

”

Delivering Value to Reduce Cost and Facilitate Success

Saint Francis Healthcare Partners strives to deliver value to our shareholder members through **member benefit programs focused on decreasing office expense and providing needed services.** Through offerings like group purchasing for office supplies, medical malpractice insurance, health insurance offerings and provider recruitment assistance, these programs have generated a reported savings of over \$996,963 to our members since inception.

There are 87 enrolled practices taking advantage of our group purchasing discount program through Advantage Trust. Most offices are able to realize 10%–15% savings on office supplies. **“We have saved over \$50,000 to include a 33% savings on radiopharmaceuticals!”** notes Stacy Simons from Cottage Grove Cardiology. Most importantly, offices are generally able to maintain their sales representative from McKesson or Henry Schein.

The Connecticut Affiliated Physicians Purchasing Group, LLC (CAP-PG) program was established in conjunction with Coverys in 2017 as a way to **pool our smaller provider groups into a large risk pool and qualify for reduced premiums.** By the end of 2018, 19% of our practices and 120 providers were enrolled in this

program. Some providers reported significant reductions in their malpractice insurance premium after enrolling. Judith Mascolo, a solo PCP in West Hartford, noted a \$3,500 drop in her premium. Ram Sankaran, M.D., a solo PCP in Avon, reported a \$4,900 decrease in his premium.

“On malpractice: we realized a savings of \$50k which is a 35% reduction in our annual premium. Wow! Great Job!”

Mark Salisbury
Cottage Grove Cardiology

Larger groups like Connecticut Gastroenterology Associates, have also benefitted from this program, saving over \$27,000 this year. Mark Salisbury from Cottage Grove Cardiology states, “On malpractice: we realized a savings of \$50k which is a 35% reduction in our annual premium. Wow!

Great Job!” Practices enrolled in the CAP-PG program can earn additional premium reductions through participation in the Med-IQ Medical Risk Management program. Live presentations and online learning offerings are available throughout the year.

Another area of need has been health insurance. Offices have noted the skyrocketing costs of providing health insurance to their office staff. Many small offices simply cannot afford to provide health insurance. SFHCP teamed up with Campbell Petrie and Engage, a Professional Employment Organization (PEO), to **offer**

health insurance in conjunction with HR, payroll and compliance coverage to our practices. In addition, SFHCP has been working with Campbell Petrie to offer a singular health insurance product line for our provider offices. We hope to have an endorsed product offering available in the very near future.

Trying to find a physician, APRN or PA to join an expanding practice or help replace someone who is retiring is not an easy task. Given the national physician shortage and the overall business climate within Connecticut, this task is even harder to complete. This past year, in an effort to help address this need, **SFHCP**

began assisting practices with provider recruitment. The SFHCP team can assist practices in composing and formulating job postings, placing the posting on multiple recruiting websites for greater reach which helps strengthen the candidate pool. Khuram Ghumman, M.D., PCP, notes, **“Your assistance in this potential hiring of an APRN at East Granby Family Practice has been phenomenal. We started getting CVs within a few weeks of job posting. We were able to select a few**

strong candidates for interview. This process, and your help connected us to the right candidate, the right fit for our practice — thanks to you, and please extend my gratitude to SFHCP for this service!”

As a new medical practice start up, SFHCP membership has been of great value by performing a number of backend functions that will allow me to be successful.

Sudeep Bansal, M.D.
Avanta Clinic

SFHCP services like these not only help existing practices within our network, **they are instrumental to new practices as well.** Sudeep Bansal, Avanta Clinic, stated, “As a new medical practice start up, SFHCP membership has been of great value by performing a number of backend functions that will allow me to be successful. If I had to purchase these services separately in the

market (e.g. credentialing, contracting, group purchasing) it would have been very expensive for me.”

Connecting providers with each other is important. SFHCP makes that happen! SFHCP began hosting Networking @ Night events each quarter where PCPs and specialist providers get together for cocktails, hors d’oeuvres, and a night of socializing. Providers participate in “Speed Networking” designed to facilitate interacting and connecting. These events provide a place to reconnect with old friends, meet new

Through offerings like group purchasing for office supplies, medical malpractice insurance, health insurance offerings and provider recruitment assistance, **these programs have generated a reported savings to our members of over \$996,963 since inception.**

colleagues, and establish referral connections. **“The networking events held by SFHCP provide excellent opportunities for primary care and specialists to meet face to face, and actually have FUN while doing it!”** states Kimberly Caprio, M.D., Trinity Health Of New England breast surgeon. Attendance now can top 100 providers per event.

On a more personal basis, the SFHCP Provider Network Relations Specialists can facilitate meetings between providers. These “Meet and Greets” provide an opportunity for a specialist to meet some PCPs, and their staff, in the office setting and exchange information and establish a referral relationship. Lori

Cabrera, office manager for Connecticut Eye Center writes, “Michael Pratt & Kelly Bluestein were instrumental in successfully planning and executing the meet and greets between ophthalmology physicians, Patrick Albergo, M.D. & Duane Austin, M.D., and the SFHCP primary care and endocrinology physicians. Making the meet and greets actually “work” may have looked

simplicistic at the surface to some, but putting all the moving pieces together and actually getting everyone in the same place at the same time was truly quite the feat!”

Connecting our providers only serves to strengthen our network as a whole.

SFHCP values our PCPs, and recognizes the hard work and dedication necessary to continue

to provide high quality care in the changing world of value-based healthcare. Primary care is often asked to perform on quality metrics, document in a collectable way and report back on performance. Offices need to review monthly reports and schedule patients for needed services and testing. SFHCP has incentive programs available to our PCPs in recognition of this work.

The PCP Incentive Program from SFHCP offers a \$1 per member per month (PMPM) incentive for each attributed patient on our value-based contracts. Payments are distributed every 6 months. This program results in over \$1 million

being distributed to our PCP providers annually. There is an additional \$1 PMPM risk adjusted incentive payment for PCPs from Anthem on their commercial contract attributed lives. Again, payments are made every 6 months and totaled nearly \$500,000 for 2018.

Another incentive program for PCPs was funded through the Medicare Shared Savings Program (MSSP) ACO waiver opportunity.

Saint Francis Hospital & Medical Center funded \$532,000 for PCP distribution based upon participation in educational activities through the year. SFHCP is pleased to note the significant increase in attendance and engagement at these meetings.

These “Meet and Greets” provide an opportunity for a specialist to meet some PCPs, and their staff, in the office setting and exchange information and establish a referral relationship.

Lori Cabrera, office manager for Connecticut Eye Center

In 2018, our networking events brought **236** individual providers together to connect with colleagues and establish referral connections

56% attended one event	29% attended two events	15% attended three or more events

* Consolidated financials for Saint Francis HealthCare Partners ACO, Inc., Saint Francis HealthCare Partners PHO Foundation, Inc., Southern New England Healthcare Organization, LLC and Connecticut Affiliated Physicians Purchasing Group, LLC

** As reported by CohnReznick LLP in 2018 (audited)

In 2018, SFHCP achieved a net profit of \$363,743 vs. a budgeted profit of \$115,514 due to its transitioning to a new funding model, as well as continued success on our value-based agreements earning an estimated shared savings total of \$3.2M across all of our commercial and Medicare Advantage payors for 2017. The Medicare Advantage agreements are still being reconciled due to delays with CMS. Together the shared savings success and change to the funds flow policy enabled SFHCP to have a positive bottom line in 2018. Additionally, early in 2019, SFHCP was able to pay off the outstanding line of credit totaling \$2.0M issued by THOfNE.

The largest annual expenses for SFHCP are salaries and benefits, physician incentives, shared savings distributions and computer software. Physician incentives totaling \$2.1M were distributed up front for the proactive work needed to be successful in our value-based agreements to achieve ACO quality requirements and reinforce the value of the covered lives our PCPs bring to our network. Likewise, there were the shared savings distribution estimate to the SFHCP shareholders totaling \$3.2M based on our approved funds flow policy of 45% to providers and 45% to hospitals, while retaining 10% for risk reserves.

In 2018 SFHCP diligently worked on the development of a regional Medicare Shared Savings Program (MSSP). The goal was to go-live on 1/1/2019, but CMS made a substantial change to the MSSP program in 2018 and postponed renewal dates to 7/1/19. The THOfNE market ACOs (SFHCP, VHA and MCA) agreed to consolidate in the new MSSP program as of 7/1/19. This program will enable the three markets to learn and develop together and aim for a path to a broader regional clinically integrated network.

Providers added to our network in 2018 including 79 physicians and 48 clinicians

Saint Francis Healthcare Partners (SFHCP), founded in 1993, is a cohesive network of independent healthcare practitioners, Saint Francis Hospital and Medical Center, and other facilities of Trinity Health Of New England working together to create the future of healthcare in our region.

This is accomplished through developing partnerships, programs, and innovations to reduce the total cost of care, improve the health of our patients, and establishes us as the network of choice for high quality providers.

Collaborating to Help Our Patients Navigate the Continuum of Care

SFHCP recognizes that quality patient care does not start and end with a visit to a provider. Demographics, social determinants and access to care all affect our patients' ability to receive the highest quality care our network has to offer. And navigating a complex health system can be difficult for a patient.

Patients are identified from providers in the community, discharges at a hospital or by utilization trends that indicate care coordination would be beneficial. Once identified, we work collaboratively with providers to assess the needs of a patient. The team offers free, voluntary and confidential services to patients who would like help making healthier life choices by setting goals, motivating progress and improving illness management.

Colin*, a 51-year-old male, was admitted at the hospital for aortic dissection with repair and GI bleed and was engaged in care management with Nina Arnold and Maria Holmes from SFHCP's Population Health team. He was previously diagnosed with CHF, dissection of abdominal aorta, HTN, PVD and CKD Stage 4. Prior to connecting with Nina and Maria, Colin visited the ED or was admitted to the hospital five times.

Colin is a veteran who lives alone and relies on his brother for support and transportation. When his brother is unable to take him, he either uses the city bus or walks to his appointments. When Nina and Maria assessed Colin he reported difficulty getting to appointments, he was unable to afford to fill his Ensure supplements and he requested help with pain management due to his recent procedure. Although he had VNA services, no physical therapy was in place.

*Not his real name

Our team works closely with acute care hospitals, post-acute facilities, ambulatory providers and community partners to improve healthcare delivery, access and patient experience. We are able to be the connection along the continuum of care and update providers about progress their patients are making toward a healthier life.

Our team is aligned with network practices to provide an accessible resource for the providers regarding the care of a patient throughout the continuum and report any changes to a patient's social determinants. We connect patients with community resources for transportation, food and healthy eating, affordable medication, education about health, exercise and wellness and mental health and substance abuse treatment.

The SFHCP Population Health team gives patients access to a broad set of resources to improve health outcomes, reduce cost and increase quality for our patients throughout the continuum of care. We utilize a collaborative approach to providing patient education, supporting the patient in the self-management of chronic conditions, reducing utilization, addressing psycho-social barriers to accessing care and serving as the central link to key providers as the patient navigates complex health care systems.

Nina was able to set physical therapy services through the VNA for a month and met Colin in person to provide Ensure samples. They explored transportation options through the VA and insurance with Colin and were able connect him with Integrative Medicine where he has been attending acupuncture sessions. Additionally, they were able to direct Colin to local farmer's markets and churches to help with meals.

Colin has reported better sleep patterns and decreased pain levels with the acupuncture sessions. He has attended every follow up appointment since discharge and has had no ED or inpatient admissions since engaging with Nina and Maria.

Nina and Maria have been fantastic to work with, very responsive, thorough and knowledgeable. THANK you for providing such excellent people to work together in caring for patients. Our other physicians in the practice are grateful as well.

SFHCP membership benefits you and your patients in many ways:

Access to a large network and strong community of providers

A focus on improving the health of your patients

A strong population health team supporting you, freeing you and your staff to focus on direct patient care

Capabilities to measure and monitor your quality and performance

Participation in value-based and fee-for-service contracts with all major payors, commercial and Medicare advantage

Incentive and education programs for you

A voice as an owner and shareholder

Support and protection with MACRA and MIPS

Creating the future of healthcare in our region.

SFHCP is a for-profit shareholder driven company, owned by its members. SFHCP is the place where providers and hospitals come together to improve the care experience and outcomes for patients, reduce costs and improve the lives of providers.
